

The main objective of this project is to analyze coffee shop sales data and generate meaningful insights to improve sales performance, customer satisfaction, and business decision-making.

**Q1. How do sales vary by day of the week and hour of the day?**

Ans : Sales are highest during morning hours, especially between **8 AM to 10 AM**. Among weekdays, **Monday, Thursday, and Friday** show higher sales performance compared to other days.

**Q2. Are there any peak times for sales activity?**

Ans : Yes, the peak sales activity occurs during the **morning hours (8 AM – 10 AM)**, where quantity orders reach the maximum level.

**Q3. What is the total sales revenue for each month?**

Ans : The dashboard shows sales data from **January to June**, with overall total sales of approximately **\$698,812.33**. Sales performance varies monthly, with some months contributing more revenue than others.

**Q4. How do sales vary across different store locations?**

Ans : Among the store locations: **Hell's Kitchen** recorded the highest sales revenue. **Astoria** and **Lower Manhattan** also showed strong sales performance

**Q5. What is the average price/order per person?**

Ans : The average bill per person is approximately **4.69**, while the average order per person is **1.44**.

**Q6. Which products are the best-selling in terms of quantity and revenue?**

Ans : Top-performing products based on sales are:

**Barista Espresso**

**Brewed Chai Tea**

**Hot Chocolate**

These products generated the highest revenue among all products.

**Q7. How do sales vary by product category and type?**

**Ans :** The **Coffee** category contributes the highest percentage of total sales, followed by **Tea** and **Bakery** products. Other categories such as packaged chocolate and flavours contribute a smaller share to overall sales.
