

The main objective of this project is to analysis coffee shop sales data and identify important business insights such as customer buying patterns, sales performance, peak hours, and top-selling products. The project helps in improving decision-making, increasing sales growth, and enhancing overall customer satisfaction through effective data analysis

- What are the daily and hourly sales trends in the coffee shop?
- Which time period shows the highest customer activity and sales?
- What is the total monthly revenue generated by the coffee shop?
- How does sales performance differ across various store locations?
- What is the average spending amount per customer order?
- Which products generate the highest sales and revenue?
- How do different product categories contribute to overall sales performance?
